## Security Systems

*SINCE 1955*

## COMMERCIAL INDUSTRIES SERVED WAREHOUSE AND INDUSTRIAL FACILITIES

From warehouses filled with product and materials to industrial facilities engaged in production of any number of goods, security is paramount to protecting the people, property and site itself. In many cases, the manufacturers have work shifts at all hours. Similarly, warehouses ship both day and night. The security systems require full time access and monitoring to ensure the best possible protection.

At AVR Security Systems, we are able design and/or manage a system to provide the protection 24 hours a day/365 days a year. The planning must also take into account any hazardous materials and other danger areas. Our expert team evaluates the unique requirements of each client, its staffing and location site in order to customize a security system that addresses challenges and minimizes potential risks.

### COMMON THREATS/CHALLENGES:

- Robbery/Theft
- Unauthorized Access
- Vandalism
- Critical Equipment
- Facility Management

### COMMON SECURITY OPTIONS:

- On-Site Alarm System
- Multi-Site Video Surveillance
- Area-Controlled Security
- 24-Hour Alarm Monitoring
- Desktop Alarm Monitoring
- Access Control Systems
- Remote Surveillance
- Equipment Notification Systems
- Hazardous Conditions Monitoring
- Multi-Location Security Plan

For those with a security system currently in place, we review ways to improve efficiencies and manage costs as well as provide on-going maintenance and service.

As technology has evolved, so has the installation of more and more audio/video equipment within factories and warehouses. This can include IP video, HD video systems and megapixel cameras. From entertainment systems in employee break rooms to a full site announcement system, the need to keep such equipment in working order is important. At AVR, the Audio Video Repair team offers a full range of maintenance programs and repair options for just such needs.
