## Security Systems

*SINCE 1955*

## COMMERCIAL INDUSTRIES SERVED OFFICE BUILDINGS AND COMPLEXES

Office buildings range in size. There are standalone locations, multi-story structures and complexes with multiple buildings. Security is needed to protect the office site – both the interior and exterior – and insure that people who work or visit the office are safe. In addition, the system plan must account for varying levels of access and depending on the environment, security requirements may differ from one company's office to the next.

At AVR Security Systems, we have experience in working with property management companies and understand the potential risks within multi-office facilities. We also have a clear picture that the security needs of the individual business owners within the large complexes. We view all aspects and design and/or manage a system to provide the best possible interior and exterior protection. Our expert team evaluates the unique requirements of each client and will design and/or manage a system to provide the best possible protection.

### COMMON THREATS/CHALLENGES:

- Robbery/Theft

For those with a security system currently in place, we review ways to improve efficiencies and manage costs as well as provide on-going maintenance and service.

As technology has evolved, so has the installation of more and more audio/video equipment within office building and complexes. This can include IP video, HD video systems and megapixel cameras. From large LCD and LED screens in reception and entrance areas to audio and video projection systems within conference rooms, the need to keep such equipment in working order is important. At AVR, the Audio Video Repair team offers a full range of maintenance programs and repair options for just such needs.
