ABOUT OUR SERVICES

■ INSPECTION AND INITIAL SITE EVALUATION

At AVR Security Systems, the first step is a comprehensive site review. This complimentary evaluation allows our certified technicians to survey the scope of work, assess the client's needs and inspect any existing network structure or surveillance system in place. We take a 360-degree view of the entire site from the inside out to ensure all information is in hand as we design the optimal security system.

■ SYSTEM DESIGN/BUILD

Using the details gathered during the site evaluation, our AVR system design team goes to work and creates a proposed security plan. We take all the angles, cameras, networking functions, access points and staffing needs into account to develop the most cost effective security system based upon the client's unique requirements. During this process, AVR's team takes a proactive view in planning for possible future needs.

The security system itself may involve a single or integrated solution with closed circuit television, access control and telephone, alarm and remote monitoring systems. For those clients who have certain security items already in place, AVR will actively recycle and repair as much as possible to help reduce the total cost of a proposed system upgrade.

■ INSTALLATION

With project approval and the client's acceptance, installation starts on the agreed upon dates and clients are given a comprehensive timeline. The fully customized security system is professionally installed by AVR employees. We do not use subcontractors so all work is guaranteed by AVR Inc. and includes warranties on all parts, labor and service.

■ FINAL CONSULTATION AND FULL SYSTEM TEST

After all equipment is installed and operational, AVR performs a final system test and orientation. This is done to instruct the client and their staff so they have a clear understanding of the security system's total operation. This familiarization will enable them to gain the greatest protection and other valuable benefits from the system as a whole. After initial orientation and training, the AVR team is available to assist with questions and guidance regarding the security system as part of its on-going service

■ MAINTENANCE

At AVR Security Systems, we have a full service repair department to assist with manufacturer warranties and customer repair requests. Our technicians are factory trained and licensed, enabling AVR to resolve repair issues large and small. As a local company and one that understands that time-sensitive importance of security, we are both convenient and reliable with emergency service available.

■ BEYOND SECURITY

As technology has evolved, so has the installation of more and more audio/video equipment within the commercial environment. From large LCD and LED screens and audio systems in restaurants or retail stores to televisions and DVD players in each hotel room, the need to keep such equipment in working order is important. At AVR, the Audio Video Repair team offers a full range of maintenance programs and repair options for just such needs.
